

PGY-3

William Cobb graduated with a bachelor of arts degree from the University of Pennsylvania before training for his doctoral degree in neuroscience at Rutgers University. There he studied the neurophysiology and neurochemistry of dopamine in the substantia nigra using microdialysis in a rat model. Upon completing his doctoral degree, he enrolled at the New Jersey Medical School where he was elected to the Alpha Omega Alpha Medical Honor Society. He joined the neurological surgery program at Cornell in 2006.
